## Neighborhood Alert:

Some companies have attempted to sell chemical abortion drugs online. Chemical abortion is always dangerous for the life of the preborn child, as it is designed to end the life of the baby, and it can also be very dangerous for women<sup>1</sup>, including: pain – possibly severe, heavy and/or prolonged bleeding for multiple weeks, fever, infection, incomplete abortion (requiring surgical follow-up), nausea and vomiting, diarrhea, feeling dizzy or having a headache, short-lasting hot flashes, hemorrhage, blood clots, undetected and possibly life-threatening ectopic pregnancy. There is also the possibility of permanent infertility if an Rh negative mother is not administered RhoGAM, a process that is missed with dangerous “no-test” abortions and telemedicine chemical abortions.
